2006 Utah Child Care Needs Assessment

Introduction
The Office of Work and Family Life (formerly the Office of Child Care) prepares a child care needs assessment at least once a year. It is a tool to assist staff and the community to determine where child care need is the greatest and where scarce resources need to be distributed.

This needs assessment reports on child care supply in each of Utah’s twenty-nine counties. Child care demand or need is estimated based on child care density (CCD). The last needs assessment produced by the Office of Child Care was prepared March of 2005.

Utah’s child care resource and referral (CCR&R) agencies are a source for information on child care needs. Customer surveys are given to parents receiving child care referrals through the CCR&Rs. The survey includes questions about child care need and the challenges to finding care.

Methodology
Needs assessment instruments vary from simple to complex. Some instruments include parent work patterns, where parents work, child care accessibility at the workplace or home, family income, and number of working parents—whether a single parent in the workforce or two-parent families with both parents employed. More complex instruments use birth data, county growth projections, and look at child care provider waiting lists.

The methodology used for this assessment is based on a model developed by Gwen Morgan, a child care systems expert from Wheelock College. Dr. Morgan recommends, “that a community should have about 25 spaces per every 100 children”. This ratio of child care spaces to child population is called child care density. A child care density less than 25 may indicate a need for additional child care spaces.

Data
Child care providers listed with Utah’s network of regional child care resources and referral (CCR&R) agencies are used in this study. The CCR&Rs contracted by the Office of Work and Family Life, obtain initial information about child care providers from the Department of Health and the Office of Child Care Licensing. Each CCR&R surveys the community for all types of after school programs. Each CCR&R also augments provider data with rates, spaces and vacancies along with other information. Data are updated by the CCR&Rs at least twice a year. Inclusion on CCR&R databases is voluntary and some child care providers opt out.
Space and vacancy data are snapshots in time. Space and vacancy data may not accurately reflect child care supply and demand in a county. Spaces may be concentrated in one area of a county while the demand for care may be in another part of the county. Space and vacancy data are from FY 2006 2nd quarter reports (Oct-Dec 2005).

Child care spaces for the purposes of this study are available spaces. Available spaces are the number of spaces a regulated provider is actually willing to take, and could be different from what they may be licensed to take. For example, if a family provider is licensed for 8 children, but only wants to care for 6 children and won’t take more than 6, then 6 is the reported available spaces.

The number of available spaces may often be less than the number of licensed spaces, but it will never be more than the number of licensed spaces. This may be a more reliable number to use when calculating the availability of child care or need for child care. If a regulated provider is unwilling to fill a certain number of spaces she/he is licensed for, then for all practical purposes those spaces are not available.

Vacancy information is provided to show space utilization. High vacancy percentages may indicate low demand or may be an indicator of the quality of care provided.

The child population data are 2005 projections provided by the Governor’s Office of Planning and Budget. The projections are based on 2000 census data.

Child Care Density (CCD) is calculated using the number of regulated spaces per 100 children (all children). The child population represents children in the following age groups: 0 through 11 months, over 1 year but less than 2 years, 2 years, 3 years, 4 and 5 year, 6 years, and 7 to 12 years.

It is to be noted that smaller numbers tend to skew percentages.
